9. EPIC-08 — Transaction History11

10. EPIC-09 — Notifications12

11. EPIC-10 — Dispute Management13

1. Introduction

This backlog translates the BRD and FRS functional requirements into Agile user stories, organised by Epic (mapped 1:1 to the ten platform modules). Each story follows the standard 'As a / I want / So that' format, with Gherkin-style acceptance criteria, MoSCoW priority, and a Fibonacci story-point estimate for sprint planning. Story points are indicative, based on relative complexity assessed against a reference story of 3 points (a simple, single-screen, single-integration change).

1.1 Epic Summary

Epic	Module	Story Count
EPIC-01	Customer Registration	6
EPIC-02	Bank Account Linking	5
EPIC-03	UPI PIN Management	6
EPIC-04	Send Money	7
EPIC-05	Collect Requests	5
EPIC-06	QR Payments	5
EPIC-07	Balance Check	3
EPIC-08	Transaction History	4
EPIC-09	Notifications	5
EPIC-10	Dispute Management	6

Total: 52 user stories across 10 epics.

1.2 Priority and Estimation Legend

Notation	Meaning
Priority: Must / Should / Could	MoSCoW prioritisation, consistent with the BRD/FRS
Points: 1, 2, 3, 5, 8, 13	Fibonacci-scale relative sizing; 3 = reference single-screen/single-integration story

2. EPIC-01 — Customer Registration

ID	User Story	Acceptance Criteria	Pri.	Pts
US-01	As a retail customer, I want to register for UPI from within the mobile app, so that I don't need a third-party app to make UPI payments.	Given a logged-in customer with no existing UPI profile, when they select 'Register for UPI', then the mobile verification screen is displayed.	Must	3
US-02	As a retail customer, I want my registered mobile number verified via OTP, so that my identity is confirmed before UPI registration proceeds.	Given a valid OTP is entered within 300 seconds, when submitted, then verification succeeds and the consent screen is shown.	Must	3
US-03	As a retail customer, I want to give explicit consent before my data is shared with NPCI/PSP, so that I remain in control of my data.	Given the consent screen is shown, when I select Decline, then registration halts and no consent record is created.	Must	2
US-04	As a retail customer, I want to select which eligible accounts to link during registration, so that only accounts I choose are UPI-enabled.	Given eligible accounts are fetched from CBS/CIF, when I select one or more and confirm, then a UPI profile is created with those accounts linked.	Must	5
US-05	As a retail customer, I want to see a clear success confirmation with my assigned UPI ID, so that I know registration is complete.	Given registration completes successfully, when the success screen loads, then my VPA is displayed with a 'Set PIN now' call to action.	Must	2
US-06	As a retail customer, I want to customise my UPI ID handle, so that I can use a memorable VPA.	Given I enter a custom handle, when it is available in the NPCI namespace, then it is reserved and assigned to my profile.	Should	3

3. EPIC-02 — Bank Account Linking

ID	User Story	Acceptance Criteria	Pri.	Pts
US-07	As a retail customer, I want to view all my eligible accounts, so that I can decide which ones to link for UPI.	Given I open Manage Linked Accounts, when the screen loads, then only active savings/current accounts are listed.	Must	2
US-08	As a retail customer, I want to link an additional eligible account, so that I can pay from more than one account via UPI.	Given an eligible unlinked account exists, when I select Add Account and confirm, then it appears in my linked accounts list.	Must	3
US-09	As a retail customer, I want to remove a linked account I no longer wish to use, so that I control which accounts are UPI-active.	Given I select Remove on a non-default account, when confirmed, then the account is delinked immediately.	Must	2
US-10	As a retail customer, I want to be prevented from removing my only/default account without setting a new default first, so that I always have a valid default account.	Given I attempt to remove the default account while others remain linked, when submitted, then the system blocks the action with a clear message.	Must	2
US-11	As a retail customer, I want to change my default account, so that payments are made from the account I currently prefer.	Given two or more linked accounts exist, when I select 'Set as Default' on another account, then it becomes the new default atomically.	Must	2

4. EPIC-03 — UPI PIN Management

ID	User Story	Acceptance Criteria	Pri.	Pts
US-12	As a retail customer, I want to set a UPI PIN using my debit card details, so that I can authorise UPI payments securely.	Given valid debit card and OTP details, when I set a new PIN, then it is encrypted on-device and never stored in plaintext.	Must	5
US-13	As a retail customer, I want to set my PIN using Aadhaar-OTP as an alternative, so that I can still register if I don't have my card handy.	Given Aadhaar-OTP is selected and validated, when I proceed, then PIN setup continues without requiring debit card details.	Should	3
US-14	As a retail customer, I want to reset a forgotten PIN, so that I can regain access without needing my old PIN.	Given I complete debit card/OTP validation, when I set a new PIN, then it replaces the old one without requiring the previous PIN.	Must	3
US-15	As a retail customer, I want to change my existing PIN, so that I can update it periodically for security.	Given I enter my correct current PIN, when I set and confirm a new PIN, then it is updated.	Must	2
US-16	As a retail customer, I want my UPI profile locked after 3 incorrect PIN attempts, so that unauthorised users can't brute-force my PIN.	Given 3 consecutive incorrect PIN entries, when the 3rd attempt fails, then the profile locks for 24 hours and a security alert is sent.	Must	5
US-17	As a retail customer, I want a clear path to unlock my account after a lockout, so that I'm not stuck without recourse.	Given my profile is locked, when I choose Reset PIN, then successful reset immediately clears the lock.	Should	2

5. EPIC-04 — Send Money

ID	User Story	Acceptance Criteria	Pri.	Pts
US-18	As a retail customer, I want to send money using a recipient's mobile number, so that I don't need to know their UPI ID.	Given a valid UPI-registered mobile number, when I enter an amount and authorise with PIN, then the payment completes and status is shown.	Must	5
US-19	As a retail customer, I want to send money using a UPI ID, so that I can pay any VPA directly.	Given a valid resolvable VPA, when I confirm the recipient name and authorise with PIN, then the payment completes.	Must	5
US-20	As a retail customer, I want to send money via bank account number and IFSC, so that I can pay someone without a UPI ID.	Given a valid account number and IFSC, when I authorise with PIN, then the transfer is submitted via UPI.	Must	5
US-21	As a retail customer, I want to transfer funds between my own linked accounts, so that I can manage my money across accounts.	Given two linked accounts, when I select source/destination and authorise, then funds move between my own accounts.	Should	3
US-22	As a retail customer, I want to be blocked from sending an amount above my limit, so that I'm protected from excessive loss.	Given an amount exceeding the per-transaction or daily limit, when I attempt to submit, then the transaction is blocked with a clear message.	Must	3
US-23	As a retail customer, I want risky transactions screened in real time, so that fraudulent payments are prevented.	Given a transaction is submitted, when the fraud engine returns Decline, then the transaction is halted before reaching NPCI.	Must	5
US-24	As a retail customer, I want a transaction that times out to be automatically reconciled, so that I'm never left uncertain whether I was charged.	Given no NPCI response within the SLA window, when the deferred status check confirms a debit without credit, then the amount is automatically reversed.	Must	8

6. EPIC-05 — Collect Requests

ID	User Story	Acceptance Criteria	Pri.	Pts
US-25	As a retail customer, I want to request money from another UPI user, so that I can be paid back conveniently.	Given a valid payer VPA/mobile and amount, when I submit, then a collect request is created and the payer is notified.	Must	3
US-26	As a retail customer, I want to approve a collect request with my PIN, so that I retain control over outgoing payments.	Given a Pending request addressed to me, when I approve and authorise with PIN, then the payment is processed as a standard transaction.	Must	5
US-27	As a retail customer, I want to reject a collect request, so that I'm not forced to pay requests I don't recognise.	Given a Pending request, when I select Reject with an optional reason, then the requester is notified of the rejection.	Must	2
US-28	As a retail customer, I want unpaid requests to expire automatically after 24 hours, so that stale requests don't linger.	Given a Pending request past its 24-hour expiry, when the expiry job runs, then its status changes to Expired and the requester is notified.	Must	2
US-29	As a retail customer, I want to send a limited number of reminders for my pending request, so that I can nudge the payer without spamming them.	Given a Pending request with fewer than 3 reminders sent, when I tap Remind, then a reminder notification is sent and the count increments.	Should	2

7. EPIC-06 — QR Payments

ID	User Story	Acceptance Criteria	Pri.	Pts
US-30	As a retail customer, I want to generate a static QR code, so that others can pay me a flexible amount.	Given I select Static QR, when generated, then the QR embeds my VPA without a fixed amount.	Must	3
US-31	As a retail customer, I want to generate a dynamic QR with a fixed amount, so that I can request an exact payment for a sale.	Given I select Dynamic QR and enter an amount, when generated, then the amount is embedded and non-editable by the payer.	Must	3
US-32	As a retail customer, I want to scan a QR code to pay, so that I can pay quickly without typing details.	Given a valid QR is scanned, when I authorise with PIN, then the payment is processed as a standard transaction.	Must	5
US-33	As a retail customer, I want merchant QR codes validated before I pay, so that I don't pay a fraudulent merchant.	Given a merchant QR is scanned, when the merchant is not found in the NPCI registry, then the payment is blocked.	Must	3
US-34	As a retail customer, I want to save or share my QR code, so that I can display it for others to scan.	Given a QR is generated, when I tap Download/Share, then the QR image is saved or shared successfully.	Could	2

8. EPIC-07 — Balance Check

ID	User Story	Acceptance Criteria	Pri.	Pts
US-35	As a retail customer, I want to check my account balance from the UPI module, so that I don't need to navigate elsewhere in the app.	Given I select an account and authorise with PIN, when the request completes, then available and current balance are displayed.	Must	3
US-36	As a retail customer, I want balance enquiries to always require my PIN, so that my balance isn't exposed without authentication.	Given I request a balance check, when no fresh PIN authentication has occurred, then the balance is not displayed.	Must	2
US-37	As a retail customer, I want to be informed if I've reached my daily balance-check limit, so that I understand why a further check is blocked.	Given I've checked balance 15 times today, when I attempt a 16th, then the system blocks it with a clear message.	Should	1

9. EPIC-08 — Transaction History

ID	User Story	Acceptance Criteria	Pri.	Pts
US-38	As a retail customer, I want to view my recent UPI transactions, so that I can track my spending and receipts.	Given transactions exist, when I open Transaction History, then the most recent 6 months are shown by default.	Must	3
US-39	As a retail customer, I want to filter my transaction history by date, status, amount, beneficiary, or type, so that I can find specific transactions quickly.	Given filters are applied, when submitted, then only matching transactions are displayed.	Must	3
US-40	As a retail customer, I want to view full detail of a transaction including its NPCI reference number, so that I have proof for any query or dispute.	Given I drill into a transaction, when the detail screen loads, then RRN, timestamps, and status are shown.	Must	2
US-41	As a retail customer, I want to export my transaction history as a PDF, so that I have a statement for my records.	Given a date range is selected, when I tap Export, then a PDF statement is generated and downloadable.	Should	3

10. EPIC-09 — Notifications

ID	User Story	Acceptance Criteria	Pri.	Pts
US-42	As a retail customer, I want to be notified immediately when a payment succeeds or fails, so that I always know the outcome.	Given a transaction reaches a terminal status, when status is determined, then a push/SMS notification is sent within 5 seconds.	Must	3
US-43	As a retail customer, I want to be notified when I receive a collect request, so that I can respond promptly.	Given a collect request is created addressed to me, when created, then I receive a real-time notification.	Must	2
US-44	As a retail customer, I want to be alerted to security events like new device registration or PIN lockout, so that I can act if it wasn't me.	Given a security event occurs, when detected, then a notification is sent that cannot be opted out of.	Must	3
US-45	As a retail customer, I want to opt out of marketing notifications while keeping transaction alerts, so that I control non-essential noise.	Given I disable marketing notifications, when a cross-sell event occurs, then no notification is sent, while transaction alerts continue.	Should	2
US-46	As a retail customer, I want a notification centre to review past alerts, so that I can revisit something I may have missed.	Given past notifications exist, when I open Notification Centre, then they are listed chronologically with read/unread status.	Should	3

11. EPIC-10 — Dispute Management

ID	User Story	Acceptance Criteria	Pri.	Pts
US-47	As a retail customer, I want to raise a dispute against a transaction, so that I can seek resolution for an issue.	Given a transaction within 180 days, when I submit a dispute with category and description, then an internal reference number is generated.	Must	5
US-48	As a retail customer, I want to attach supporting evidence to my dispute, so that my case is better substantiated.	Given I am raising a dispute, when I attach a file under 5MB, then it is stored with the dispute record.	Should	2
US-49	As a retail customer, I want to track my dispute's status and see the NPCI reference number, so that I know where things stand.	Given a dispute has been escalated to NPCI, when I view Dispute Tracking, then the NPCI reference number and current status are shown.	Must	2
US-50	As an operations user, I want to review and update dispute investigations, so that I can progress resolution.	Given a dispute is Under Investigation, when I add notes and update status, then the customer is notified of the change.	Must	3
US-51	As a retail customer, I want to see my refund status if my dispute is upheld, so that I know when to expect my money back.	Given a dispute is resolved in my favour, when a refund is processed, then the refund status and credit date are displayed.	Must	3
US-52	As an operations supervisor, I want overdue disputes automatically escalated, so that TAT breaches are caught proactively rather than missed.	Given a dispute exceeds its category TAT, when the escalation job runs, then it is flagged and, where applicable, submitted to NPCI escalation.	Should	3
